Summary

Master's student in Data Science with experience in data analytics, machine learning, NLP, and AI system evaluation. Skilled in Python, SQL, data modeling, and developing and testing end-to-end data and machine learning workflows. Experienced in troubleshooting AI model environments, evaluating model outputs, and translating analytical requirements into practical solutions.

Education

Master of Science in Data Science, Analytics and Engineering	Graduating Spring 2027
Arizona State University	3.67 GPA
Bachelor of Engineering in Artificial Intelligence and Machine Learning	2021 - 2025
University College of Engineering, Osmania University	8.4/10.0 GPA

Technical Skills and Certifications

Programming & Querying: Python, SQL, C++, Java

Data & Analytics: Data Modeling, Data Visualization, Exploratory Data Analysis, Machine Learning, Statistical Analysis

AI & ML: NLP, Deep Learning, Computer Vision, Transformers

Libraries & Frameworks: Pandas, NumPy, Scikit-learn, TensorFlow, Hugging Face Transformers

Tools & Platforms: Git, GitHub, Jupyter Notebook, Anaconda

Certifications: Machine Learning with Python - IBM | Databases & SQL for Data Science with Python - IBM | Programming with JavaScript - Meta | AI Engineer - OneRoadmap

Professional Experience

MLOps Engineer - Vosyn May 2026 – Aug 2026

- Evaluated pretrained Cantonese text-to-speech and voice-cloning models, including Qwen3-TTS, WSYue-TTS, and CosyVoice2-Yue, comparing speech generation quality and practical usability.
- Set up model environments, resolved dependency and runtime issues, and configured pretrained checkpoints for reproducible speech generation experiments.
- Ran inference and reference-voice experiments and validated generated audio outputs for stability, intelligibility, pronunciation, and speaker similarity.
- Investigated Cantonese-specific evaluation methods, including Jyutping Error Rate and Tone Error Rate, to assess pronunciation and tone accuracy across models.

AI Intern - Solix Technologies Oct 2024 – Dec 2024

- Developed NLP-based automated content generation system using Python, Hugging Face Transformers, and OpenAI APIs, improving output relevance and personalization.
- Built preprocessing pipelines with NLTK and spaCy, including tokenization, lemmatization, and stopword removal.
- Fine-tuned transformer models on domain-specific datasets, improving output consistency by 18%.
- Documented system architecture, API workflows, and prompt engineering strategies for scalability.

Intern - Coincent Apr 2024 – June 2024

- Implemented Vision Transformer (ViT) using TensorFlow/Keras for multi-class image classification on CIFAR-10 dataset.
- Built image preprocessing pipelines, Hyperparameter tuning, and augmentation strategies.
- Achieved 85% Top-1 accuracy and 95% Top-5 accuracy, outperforming baseline CNN by 12%.

Junior Manager & Customer Support Manager - AIESEC, Hyderabad & Nepal June 2023 – June 2024

- Managed CRM records and automated participant tracking for 500+ international program participants.
- Coordinated cross-functional teams across 3 countries and improved onboarding workflows.
- Developed dashboards for engagement metrics and facilitated leadership workshops.

Projects

Imbalanced Binary Classification with XGBoost, Python, Scikit-learn, XGBoost, Pandas Fall 2025

- Built an end-to-end ML pipeline for highly imbalanced tabular data using Balanced Error Rate (BER) for fair model evaluation.
- Applied preprocessing and class-weight optimization to improve minority-class detection and model reliability.
- Trained and tuned an XGBoost model achieving 63% balanced accuracy on unseen test data.

Air Quality Sensor Calibration using Machine Learning, Python, Gradient Boosting, Random Forests Fall 2025

- Developed ML calibration models to map low-cost sensor signals to accurate air pollutant concentrations.
- Engineered temporal and meteorological features to capture nonlinear sensor behavior.
- Evaluated Gradient Boosting and Random Forest models using time-aware validation and regression metrics.

Online Placement & Networking Portal, React, Node.js, Express, REST APIs Fall 2024 - Spring 2025

- Implemented a full-stack platform connecting students and recruiters, developing profile management, project listings, and dashboards using React and Node.js.
- Implemented secure authentication and role-based access control to protect user data and system operations.
- Optimized usability through iterative testing, debugging, and responsive UI improvements to enhance overall user experience.

Spelling Correction Tool, Python, NLTK, N-Gram Modeling, Jupyter notebook Spring 2024
